

HYDROZONIX

Providing mobile, high-rate, environmentally responsible water treatment solutions to the oil and gas industry.

Our system employs an advanced oxidation process using ozone, hydrodynamic and acoustic cavitation, and electrochemistry to treat water. This powerful, chemical-free combination of sciences provide very high rate treatment for: Bacteria, Scale, Organics (oil, grease, volatiles), and Hydrogen Sulfide.

Samples taken before and after treatment of flowback water by the Hydrozonix EF80.

The Hydrozonix EF80 system treats up to 80 barrels per minute.

Tube Blocking Test Results Marcellus Flowback 12/12/11 - 02/15/12

*The graph below displays tube blocking test results over a two month period.
The red line displays initial influent and the gray line displays effluent after two months.*
