

The 1990s Called and It Wants Its
Legal Department Technology Back

Platform, Apps and App Development

Onit Apps for Your Enterprise

app

/ap/

noun Computers, informal

1. an application, typically a small, specialized program downloaded onto mobile devices that is designed for a specific task for personal use.

en·ter·prise app

/ 'entər,prɪz ap/ — aka Smart Process App (SPA)

noun Computers, informal

1. an application, typically a small, specialized program designed for a specific task or use in a corporate environment.

**Powerful Enterprise Apps. Designed For People.
Built For Change.**

Build, Integrate and Deploy Powerful Apps Faster and With Better Results

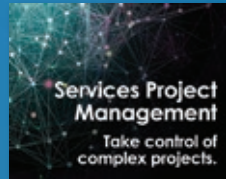

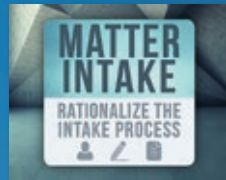

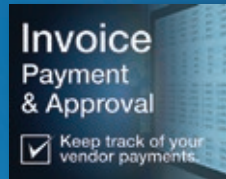

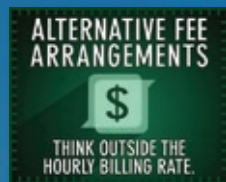

Onit's Apps evolve with your business needs. Whether you are looking to simplify your contract management process, build the most full-featured e-billing or matter management system or implement a self-serve NDA solution, Onit Apps are easy to create and implement. How easy? We've configured Apps in less than 30 minutes and helped customers get up and running faster than they could sign a contract. Start with one App and build others as needed.

Onit Apps are built on the powerful Onit App Builder platform, an innovative tool that makes it easy to create, modify and deploy Apps with robust workflow, transaction management and reporting capabilities. Using a truly collaborative platform, Onit Apps help our customers solve real business problems without the need for costly support, training or IT infrastructure.

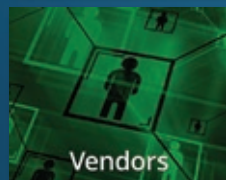

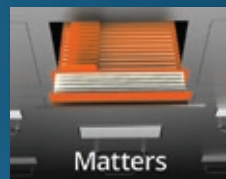

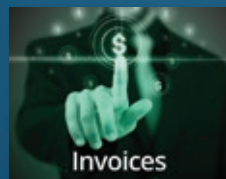

"Onit Apps are designed for the way I work ... not how enterprise systems expect me to work. With Onit, it's easy to manage work, update colleagues and build new Apps. You might say they built it for the enterprise of me."

– Fortune 500 Customer

E-billing and Matter Management Apps

The Onit App Advantage

One Platform

Onit is the “platform” your legal department needs to achieve its business goals. Gartner states that legal departments increasingly need to augment their Enterprise Legal Management (ELM) systems to accommodate business process, workflow and collaboration capabilities.¹ ELM vendors primarily focus on solving problems internal to the legal department such as e-billing or matter management.

Gartner concludes that legal departments must take the next step and truly collaborate with the business people they support through platforms that support the collaborative work they do. Onit App Builder is the only platform that can grow beyond your legal department and automate all of your enterprise process needs. Designed for people — not enterprises — our innovative Apps are the next frontier for software because they are designed for people and built for change.

App it. With Onit.

Onit Apps are easy to develop and deploy — it’s that simple. Whether you are looking to automate one process or 15 processes, users can get up and running quickly with little to no training. In fact, you can buy, configure and deploy what you need when you need it. Unlike “enterprise” software, enhancements to Apps can be made anytime. The process is completely iterative.

Collaboration

Collaboration is vital for managing processes in any department. Onit gives team members an easy way to communicate in a shared workspace. All team members know exactly what is going on without having to search in Outlook for status updates.

Unmatched Time to Value

Traditional process management initiatives take between nine to 12 months for scoping, implementation and final execution. ROI is typically not measured for months after completion. Onit Apps are configured and implemented in weeks — not months — so you can reap the financial and operational savings faster.
